EXPERIENCE

Software Developer

Makeship - Remote

01/2021 - Present

- Lead the planning and development of a custom Shopify storefront and internal dashboard apps built with React
- Worked on building out the backend API in Go using microservices architecture with Docker
- Architected, developed and maintained production and staging environments on AWS focusing on security, scalability, and monitoring
- Aided with building out a scalable asynchronous message bus system using Kafka to improve reliability of database operations

Full Stack Developer

Freelancer

05/2019 - 12/2020

- Met the needs of various clients by developing reliable and scalable web apps
- Developed an online booking system for small businesses with an open API for developers
- Built websites for small businesses using CMS platforms for easy revisions

Full Stack Developer

UniquiD - Remote

06/2018 - 09/2019

- Lead the planning, design, and development of a scalable client dashboard built with React and Next.js
- Successfully integrated the dashboard with the Litecoin blockchain using IAM smart contracts
- Participated in biweekly retrospectives and sprint planning following agile and scrum methodology

JavaScript Developer

GitStart - Remote

08/2017 - 06/2018

- Developed and maintained an open source module to create a REST API proxy with authorization and caching middleware
- Created internal standards and guidelines for tech specs, documentation, and testing
- Worked on a developer crowd-sourcing dashboard in React to reduce friction and increase productivity between clients and developers
- Implemented automation techniques to facilitate rapid scalability and growth of the now Y Combinator backed startup
